Beth:

All of the analytical results are posted to the epaosc website. They are separated by the following:

EPA - Frac Tanks

EPA - Vacuum Boxes

EPA - Tank Trailers

FT1002 results are split between Frac Tank and Vacuum Box locations as part of the results are combined in an SDG with a Vacuum Box.

We need to be cognizant of the TCLP results where the detection limit exceeds the regulatory level. I think we need then look at the Totals data to see if the result is less than the regulatory level. I will confirm with our RCRA folks to see if that is sufficient.

Thanks

Gary Moore
